

## Don't Just Tell Them, Show Them

With just a PC and a browser, you can substantially improve the quality of your conference calls simply by visually engaging the participants on the call. ConferencePlus and IBM® Lotus® Sametime® Unyte™ Meeting empower users to share presentations, documents, web content, applications and desktops with individuals and groups around the world in real time.

### Key features include:

- + Application / desktop sharing
- + Remote control
- + SSL encryption
- + Chat
- + Marker for annotation
- + Hand raising
- + Multiple hosts
- + Videocasting

## System Requirements

### General System Requirements

- + Current operating system / platform
  - Microsoft® Windows® 2000/XP/Vista/Server 2003 System
  - Solaris/Unix®/Linux Operating System
    - + Microsoft® Internet Explorer 6.0 and higher
    - + Netscape® 7.0+ or Mozilla 1.0+
  - Mac Operating System
    - + Firefox
    - + Safari 1.1
- + 128Kbps or higher Internet connection for large document sharing
- + Minimum CPU: ~300Mhz
- + ActiveScripting/JavaScript and cookies enabled

### Additional requirements for Application Sharing (Presenters)

- + Microsoft Windows Operating System with Internet Explorer 6.0+ and ActiveX enabled
- + 240Kbps and higher Internet connection recommended

### Additional Requirements for Viewing Shared Applications

- + Browser with an enabled Java Virtual Machine(JVM), Active X or Flash
- + 240Kbps and higher Internet connection recommended

In addition to these general system requirements, a conferencing plug-in is required to share applications. Application and Desktop Sharing are only supported on Windows platforms with the Internet Explorer or Firefox browsers. If the Sharing plug-in is not already on your system prior to starting Application Sharing you will be prompted to download.
